Trần Đình Phi Hùng

FrontEnd Developer

tdphihung0807@gmail.com 0362370754 github.com/PHung112 Thu Duc District, Ho Chi Minh City 08/07/2004

OBJECTIVE

Final-year Software Engineering student seeking a Frontend Intern position. Strong in ReactJS and building responsive web applications, with hands-on experience in real-world projects involving authentication, dashboards, and performance optimization.

EDUCATION

Major : Software Engineering *2022 - 2026 (Expected)*

Ho Chi Minh City University of Technology

- GPA : 3.33/4.0

TECHNICAL SKILLS

Front-end:	JavaScript, ReactJS, HTML, CSS, Tailwind CSS, Responsive Design.
Back-end:	Spring Boot (basic) , RESTful API, Authentication (JWT/Basic Auth).
Databases:	MySQL, SQL Server, MongoDB.
Tools & Others:	Git, Postman, Swagger, Unit Testing (Basic).

PROJECTS

DocumentSharing *May 2025 - Dec 2025*

Position: Frontend Developer

Description: An online document-sharing and community platform tailored for students. The system allows users to upload and download academic materials while fostering a collaborative environment through a blog-style interaction system. It features a subscription-based (Premium) model and a robust admin panel for managing users and documents.
Project size: 3
Responsibilities:

- Implemented Firebase Authentication (Google & Email) integrated with a custom Backend profile system.
- Developed a document management system supporting multi-step uploads, client-side compression, and PDF preview to improve user experience..
- Built a subscription system with QR payment integration and real-time transaction tracking.
- Developed an Admin Dashboard for document moderation, user reporting, and system statistics.
- Optimized UI performance using debouncing, lazy loading, and memoization, reducing unnecessary re-renders.

Tech Stack: React (Vite), HTML/CSS, Axios, Firebase Auth, RESTful API, Azure Blob Storage
Github:

- Backend: https://github.com/Felix5124/DocumentSharingAPI
- Frontend: https://github.com/Felix5124/document-sharing-frontend

TaskManagement *Feb 2026 - Mar 2026*

Position: Fullstack Developer

Description: A comprehensive task management system designed for team collaboration, featuring project lifecycles, role-based access control (RBAC), and real-time notifications for seamless workflow management.
Project size: Personal Project
Responsibilities:

- Built a Fullstack task management system using **Spring Boot** and **React**.
- Developed secure authentication system using JWT and Google OAuth2.
- Implemented real-time task updates and notifications using WebSocket (STOMP).
- Integrated Cloudinary API for image hosting and Axios Interceptors for session handling.

Tech Stack: React (Vite), TailwindCSS, Spring Boot, Spring Security (JWT/OAuth2), MySQL, WebSocket (STOMP), Cloudinary.
